

If the automatic segmentation didn't work as expected, you can manually annotate the organoids with napari using the following command:

```
singularity run -B /group/testa/ docker://alessiavalenti/imaging:TMA-0.0.1 napari
```

Save the txt output file as '20240424\_manuel\_lessli\_0130\_ScanRegion0\_manual\_bbox.csv' at the following path /group/testa/Project/EndPoints/TPSSU/analysis/manual\_bbox/
